Abstract:

One of the greatest difficulties of the twenty-first century is environmental change. Humans have made some progress in restoring the environment over the past few decades, but not nearly enough to be considered commendable. However, in recent months, the ecosystem has recovered to a great extent, perhaps having a favourable impact on global climate change as a result of the COVID-19 pandemic's effects. As a result, it alters how people live their lives and how the environment functions as a whole. The numerous good benefits of lockdown on nature and society, including biodiversity, are discussed in this paper.

Keywords: Coronavirus, Education, Environment, Pandemic, Society.

1. Introduction:

In the human population, various strains of coronaviruses have been identified as the causative agents of respiratory infections, encompassing mild conditions like the common cold, as well as
