The Effect of Online Teaching on Student Learning Outcomes during the COVID-19 Pandemic: A Case Study in India

Dr. Jyotirmay Roy*

Abstract: Due to the COVID-19 pandemic, many schools and colleges in India were forced to shuttered in order to stop the virus's spread. Due to this circumstance, people started using internet media while at home. Additionally, during this time, there had been a growth in the usage of online learning tools themselves. This study seeks to determine how the pandemic has affected education. In this review's assessment of the literature, the tool was a qualitative one. Results have revealed that learning online tools and applications helps to increase the social distance and this led to prevent the spread of the Covid-19 outbreak, and online tutoring services for students were in high demand because they helped students to understand. It is questionable that whether learning was something that students wish to develop and add to in order to increase their knowledge and insights.

Keywords: *Online Teaching, Covid-19, Student Learning, Pandemic.*

*Assistant Professor, Department of Bengali, Birpara College.
