

Programme Outcomes (PO) – B.A./B.Sc. in Geography (FYUGP)

By the end of the undergraduate programme, students will be able to:

1. **Understand the Earth System:** Gain scientific knowledge of physical processes shaping the Earth such as geomorphology, climatology, and geotectonics.
2. **Comprehend Human-Environment Interactions:** Understand spatial organization of settlements, population, and economic activities and their interaction with the environment.
3. **Apply Geospatial and Analytical Tools:** Use cartographic techniques, statistical tools, and geospatial technology for geographical analysis and problem-solving.
4. **Develop Research and Inquiry Skills:** Formulate hypotheses, gather and interpret data, and draw conclusions using scientific reasoning.
5. **Promote Sustainable Thinking:** Advocate for sustainable resource use, environmental conservation, and inclusive urban/rural development.
6. **Strengthen Communication and Visualisation Skills:** Develop the ability to present geographic information through maps, graphs, diagrams, and presentations effectively.
